

CloudOffice is a secure all-in-one solution set combining Apollo Office Systems's four core products and services: Infrastructure as a Service (IaaS), Disaster Recovery as a Service (DRaaS), Desktop as a Service (DaaS), and Hosted Microsoft Exchange.

We can package your business applications and add them to your CloudOffice. Your employees will be working in an enterprise-grade environment that is controlled and monitored 24x7x365. Additionally, all your data will be backed up in the cloud securely. With Apollo Office Systems's CloudOffice, you will have solutions that support collaboration and mobile workforces from any device, with any app, anywhere. It is the future of IT.

Microsoft Office 2013 offers flexible and powerful new ways to deliver your best work - at the office, at home, or at school.

Hosted Exchange enables you to communicate using business-grade email while eliminating the need to upgrade and maintain a physical Exchange server. Archiving and encryption services are available for compliance and security purposes. Tailor your solutions based on your unique needs and ensure that your communications are always available. You remain in control.

Unlike many competitive products, CloudOffice was built on a multi-tenanted Geo Load Balanced Active/Active architecture. This unique design offers several benefits to its end users but most importantly means that customers' virtual environments are built redundantly upon one another creating the ultimate design in Disaster Recovery and Business Continuity.

Apollo Office Systems's consistent hardware refresh cycles ensure that customers' applications are running on reliable maintained equipment at all times. Services are built in geographically redundant data centers, so if a primary site goes off-line, the secondary site will initiate and users will be routed to that site. CloudOffice is a reliable and secure way to store data and clients will experience the latest technology with exceptional data protection.

Standard Package Includes:

- Virtual Desktop - (2 CPU/2GBs RAM)
- Microsoft Office 2013
- Microsoft Exchange 2013
- Unlimited Bandwidth
- Unlimited Document Storage

Add-On Services:

- Microsoft Office Pro
- SMB Applications
- Shared Drive
- Citrix ShareFile

Apollo Office Systems's CloudOffice product replaces a client's physical IT infrastructure by moving all the customer applications to the Cloud. This eliminates the need for the client's IT team to maintain and support the physical hardware. This will also minimize the workload on the customer's finance department regarding the procurement of IT hardware and associated maintenance contracts.

At the infrastructure level, CloudOffice is fully backed by Active Directory architecture to simplify the deployment of user accounts. With our front-end control panel, even non-technical clerical and HR workers have the ability to easily spin up user accounts and provision users with a Desktop, Mailbox, Applications, and File Permissions in one fluid and smooth process using a "next, next, finish" procedure. Built on the same technology as our CloudDesktop platform, rich HD graphics and a seamless end user experience are just a few of the front facing benefits of our CloudOffice product offering.
